PROFESSIONAL SUMMARY

Senior Full-Stack Developer with 6+ years of experience architecting and delivering scalable, high-performance web applications and Progressive Web Apps (PWAs) across fintech, banking, and enterprise platforms — spanning React/Next.js/TypeScript frontends and Python (Django/DRF) and Node.js (NestJS) backend services. Expert in modern state management, RESTful API design, relational and caching data layers (PostgreSQL, Redis), and secure, production-grade architecture (JWT, OAuth2, RBAC), with a strong focus on accessibility (WCAG 2.1) and performance optimization (Core Web Vitals). Proven technical leader with experience owning systems end-to-end — from database schema and API design through frontend delivery and deployment — mentoring engineers, and shipping full-stack, production-grade solutions for banks, fintechs, and enterprise clients across Africa and the US.

CORE SKILLS

Languages, Frameworks, UI & Styling: JavaScript (ES6+), TypeScript, Python, React.js, Next.js, Vite, HTML5 (semantic markup), CSS3, Tailwind CSS, Chakra UI, Bootstrap, Flexbox, CSS Grid, responsive & cross-browser design

State & Data Management: Redux Toolkit (RTK), RTK Query, TanStack Query, Zustand, client-side & server-state management, caching, optimistic updates

Architecture & Design Principles: Separation of Concerns (SoC), DRY, SOLID principles, component-driven architecture, modular/clean architecture, scalable frontend patterns, Nx monorepo for multi-app frontend architecture

Design Systems & UI Engineering: Reusable component libraries, design systems, atomic design, Storybook documentation, theming and consistency strategies

Data Visualization & Animation: Chart.js, Recharts, basic D3.js, interactive dashboards, Framer Motion, UI transitions, micro-interactions

Testing & Quality: Jest, React Testing Library, Cypress, unit/integration/E2E testing, TDD principles

Performance & Accessibility (A11y): Code splitting, lazy loading, memoization, bundle optimization, tree shaking, Lighthouse, Core Web Vitals (LCP, CLS, FID), WCAG 2.1, ARIA roles, keyboard navigation, screen reader support

Internationalization (i18n): Multi-language support, locale-aware formatting, RTL/LTR handling, translation for Igbo, Hausa, and Yoruba

Backend & APIs: RESTful APIs, error handling, pagination, API versioning, basic WebSockets

Security, DevOps & Tooling: OAuth 2.0, JWT, Firebase Authentication, RBAC, XSS & CSRF prevention, secure cookies, Docker, Kubernetes, AWS, Azure, CI/CD (GitHub Actions, Azure DevOps), Git

Backend Frameworks: Python, Django, Django REST Framework (DRF), Node.js, NestJS

Databases, Caching & Async Processing: PostgreSQL, Redis, MySQL, Prisma ORM, Celery, Redis Pub/Sub, Socket.IO / WebSockets

Backend API, Security & DevOps: RESTful APIs, JWT Authentication, OAuth2, CORS, Swagger / OpenAPI, Docker, Docker Compose, AWS, Vercel

Backend Testing & Tooling: Pytest, Pytest-Django, Jest, Supertest, Postman, Git, GitHub Actions (CI/CD)

AI-Assisted Development: GitHub Copilot, Claude (Anthropic) — AI pair-programming, code review assistance, and rapid prototyping

PROFESSIONAL EXPERIENCE

Senior Frontend Developer — INFINION TECHNOLOGIES LTD, Lagos, Nigeria

Sept 2025 – Present

- Own frontend architecture and technical decision-making for enterprise-grade applications, applying SOLID principles, Separation of Concerns, and DRY practices while collaborating closely with product, backend, AI, and project management teams.
- Delivered multiple Proofs of Concept (POCs) from design to production, meeting strict technical requirements and securing client sign-off.
- Led frontend development of an AI-powered banking chatbot platform and an enterprise innovation-management platform for Access Holdings (parent company of Access Bank Nigeria), building scalable user and admin interfaces with React, Next.js, Tailwind CSS, and Redux Toolkit (see Key Projects).
- Implemented secure authentication and access control using MSAL, OAuth, and RBAC.
- Improved application performance through code splitting, lazy loading, and memoization, contributing to measurable improvements in Core Web Vitals.

Lead, Software Developer — MSORG DEVELOPERS LTD, Lagos, Nigeria

Mar 2024 – Aug 2025

Held concurrently with the Payvessel role below — both organizations shared the same executive leadership (CEO).

- Led a team of 8 software engineers across full-stack delivery, overseeing project planning, execution, and delivery while maintaining high code quality and adherence to engineering best practices.
- Took ownership of frontend architecture across 9+ production applications, establishing reusable component libraries, internal design systems, and coding standards aligned with SOLID, DRY, and clean architecture.
- Built and maintained backend services using both Python (Django / Django REST Framework) and Node.js (NestJS), depending on project requirements, exposing RESTful APIs that powered the frontend applications across the team's portfolio.
- Designed database-backed API endpoints against PostgreSQL, implementing JWT-based authentication and role-based authorization shared consistently across frontend and backend layers.
- Introduced testing practices using Jest and React Testing Library on the frontend and Pytest / Pytest-Django on the backend, reducing regressions and improving release confidence across the team.
- Reviewed, approved, and merged pull requests, ensuring clean, maintainable, and well-documented code across all contributing engineers.
- Designed scalable frontend systems using Next.js, React, TypeScript, and Redux Toolkit, emphasizing modular design, clear Separation of Concerns, and maintainable state architecture.

- Mentored junior engineers through code reviews, technical guidance, and pair programming, improving team productivity, code quality, and onboarding efficiency.
- Participated in sprint planning, estimation, and stakeholder reviews, aligning technical delivery with business goals.

Senior Frontend Developer — Payvessel, Lagos, Nigeria

Mar 2024 – Aug 2025

Concurrent with MSORG DEVELOPERS LTD above, under shared executive leadership between the two organizations.

- Collaborated with cross-functional teams to redesign a large-scale merchant dashboard, landing page, and administrative console using React, Redux, and Tailwind CSS, resulting in an estimated 20% increase in user task completion rates.
- Implemented a role-based access control (RBAC) system, providing granular permissions for multiple admin roles and improving compliance, security, and operational oversight by approximately 25%.
- Developed transaction management features supporting both single and batch actions, reducing administrative processing time by an estimated 35% and improving operational efficiency.
- Built and integrated banner management and blacklist systems, enhancing platform control, fraud prevention, and content governance.
- Optimized frontend performance and state management, improving admin dashboard load speed and responsiveness by over 45%.
- Enhanced customer support and dispute resolution workflows through improved admin tooling, contributing to faster issue resolution and improved internal service efficiency.

Software Developer — GOATek Inc, Remote, United States

Jul 2023 – Feb 2024

- Designed, developed, and maintained full-stack web applications, building React/TypeScript frontends against Python-based backend services (REST APIs, business logic, data persistence) for scalable, production-ready systems.
- Built and maintained RESTful backend endpoints in Python, integrating them with the React frontend to support core product functionality and data flows.
- Collaborated with cross-functional and geographically distributed teams across multiple time zones, consistently meeting project milestones and delivery timelines.
- Built responsive, user-centric web interfaces using React and TypeScript, improving usability, performance, and cross-device compatibility.
- Performed code reviews, debugging, and unit testing (frontend and backend) to ensure high code quality, maintainability, and adherence to software engineering best practices.
- Used Git for version control and actively participated in Agile development processes, including sprint planning and iterative delivery.

Web Developer — Neon Global Technologies, Remote, Nigeria

Sept 2022 – Jun 2023

- Designed, developed, and maintained dynamic, production-ready websites using WordPress, delivering reliable frontend and backend functionality.
- Built an interactive admin dashboard with analytics and user-activity monitoring, enabling the business to track customer behavior and make data-driven decisions.
- Developed and deployed an appointment booking system for client consultations, improving customer engagement and streamlining operational workflows.
- Optimized website performance and ensured responsive, cross-device compatibility, improving usability.

Web Developer — Criset Multiconcept Services, Abuja, Nigeria

Jan 2020 – May 2022

- Built and maintained websites for small business clients using WordPress and Bootstrap.
- Developed responsive user interfaces with HTML, CSS, JavaScript, jQuery, and React.
- Customized WordPress themes and plugins to meet client requirements and improve functionality.
- Optimized website performance, usability, and cross-browser compatibility across desktop and mobile devices.

KEY PROJECTS

Access iD8 — Enterprise Innovation Management Platform (Access Holdings)

Senior Frontend Engineer

Built for Access Holdings — the parent company of Access Bank Nigeria and one of Africa's largest financial services groups. Access iD8 is an enterprise-grade innovation-management platform built with a modular React and TypeScript architecture supporting multiple roles, multiple workflows, and parallel development by several frontend engineers without introducing coupling. The app is structured around a route-driven, role-aware UI where access, navigation, and layout are all resolved centrally from configuration — routes map to roles (Ideators, Jurors, Node Assessors, IVAC, Risk & Compliance, Admin) from a single codebase. This was the most architecturally demanding project of my career.

- Built the centralized, route-driven access-control system — protected routes, layout wrappers, and lazy-loaded screens — so navigation, permissions, and layout resolve from configuration instead of being hardcoded per screen, letting engineers work on isolated feature areas (challenges, submissions, assessments, analytics, templates, user management) without breaking unrelated modules.
- Built multi-stage, dynamic idea-submission forms and the AI-assisted / manual review-scoring workflow across idea-stage, pretotype, and pitch-a-thon rounds, fixing state-initialization bugs across navigation flows so scores, comments, and submission data render consistently regardless of entry path.
- Designed role-specific, multi-version dashboards with live data visualization — submission volume, review status, and scoring analytics — tailored to each of the platform's six user roles.
- Built data-dense table views with pagination and filtering across submissions, users, and assessments, aligning every view with live backend response shapes to keep behavior predictable as API contracts evolved.
- Implemented the authentication flow and user-management features, and hardened runtime stability by eliminating undefined-state crashes and making dynamic forms and drawers resilient to changing API payloads.
- Wrote Jest unit tests and Cypress end-to-end tests covering submission, assessment, and authentication flows.

Stack: React, TypeScript, Vite, Redux Toolkit / RTK Query, Microsoft MSAL, Figma, Jest, Cypress

InTrust — Insurance Claims Platform (B2B Console + Customer Portal)

Senior Frontend Engineer

A full-suite insurance claims ecosystem: an internal B2B operations platform used by Customer Service, Finance, and Admin teams to process claims from submission through payout, plus a companion customer-facing claimant portal where policyholders track their own claims, view audit history, and get guided support through an embedded chatbot.

- Owned the B2B platform frontend end-to-end: architected a from-scratch RBAC system (40+ granular permissions), config-driven routing, and a custom RTK Query layer with silent MSAL token refresh; shipped as an installable PWA on Azure Static Web Apps.
- Built cursor-based (Cosmos DB-native) pagination, real-time notifications, and a full reusable component/design system for the internal platform.
- Implemented the complete customer-portal auth flow — login, email/OTP verification, password creation, token persistence, refresh-token handling — and led the migration from mock data to live backend integration across the dashboard, claims list, and analytics.
- Integrated an embedded support chatbot into the customer portal's authenticated shell, and covered core flows on both applications with Jest unit tests and Cypress end-to-end tests.

Stack: React, TypeScript, Vite, Redux Toolkit / RTK Query, Azure MSAL, Recharts, Chart.js, Figma, Jest, Cypress

E-Commerce Backend Platform — Multi-Vendor Marketplace

Senior Backend Engineer

A modular multi-vendor e-commerce backend supporting seller onboarding, product catalog management, order processing, and real-time customer engagement — handling the full commerce flow from account creation and catalog management through cart reservation, checkout, and post-purchase analytics for a growing multi-seller marketplace.

- Owned the backend end-to-end: architected a modular NestJS system with domain-isolated modules (sellers, products, orders, customers), a global validation pipe, and a global auth guard with a public-route opt-out pattern.
- Built the full authentication system — OTP magic-link login via Redis, Google OAuth, and a JWT access/refresh token strategy — behind a secure-by-default global guard.
- Implemented the cart reservation and checkout flow, including Redis-based cart holds with expiration to prevent race conditions and protect inventory during high-demand purchase windows.
- Built real-time order and inventory notifications via Redis pub/sub and Socket.IO, keeping sellers and buyers updated on order status and stock changes.
- Designed the database schema and migration strategy in PostgreSQL via Prisma, and built the analytics subsystem (KPIs, revenue, top products, customer segmentation) alongside Swagger/OpenAPI documentation for frontend consumption.
- Prepared the application for both local and serverless (Vercel) deployment, resolving practical hosting issues such as Swagger asset bundling and WebSocket adapter compatibility.

Stack: NestJS, TypeScript, PostgreSQL, Prisma, Redis, Socket.IO, JWT, Google OAuth, Swagger / OpenAPI, Docker, Jest, Supertest

AI Banking Chatbot & Admin Dashboard — Fidelity Bank Ghana

Senior Frontend Developer

Conversational banking frontend plus a companion internal admin console for a live retail bank.

- Built a full chatbot interaction engine — message rendering, suggestion buttons, file upload, camera capture, geolocation, and session persistence — for customer self-service.
- Built the companion admin dashboard: ATM/branch/loan management, chat-history drilldowns, and Chart.js analytics with PDF export.
- Implemented a shared Microsoft-identity authenticated API layer with token injection and 401 retry logic across both applications.

Stack: React, TypeScript, Vite, Redux Toolkit, Tailwind CSS, MSAL / Graph, Chart.js, PWA

EDUCATION

BSc. Computer Science — University of Abuja, Gwagwalada, Abuja, Nigeria — 2022

OND. Computer Science — Edo State Polytechnic, Usen, Edo State, Nigeria — 2019

COURSES & CERTIFICATIONS

- Machine Learning A-Z: AI, Python & R + ChatGPT Prize — SuperDataScience Team, Udemy (2025)
- AWS Cloud Technical Essentials — AWS (2024)
- Introduction to Containers – Docker, Kubernetes and OpenShift — IBM (2024)
- Django Application Development with SQL and Databases — IBM (2023)
- Node.js – The Complete Guide (MVC, REST APIs, GraphQL, Deno) — Udemy (2023)
- The Ultimate 2022 Fullstack Web Development Bootcamp — Udemy (2022)
